# EMM Development Procedure

**GOAL:**

- Avoid Problems - Push Production Ready Changes **ONLY**

**Procedure for Adding Change**

On the local repo:

- Baseline feature branch from appropriate main or release branch
- Change is always committed to a feature branch
- Test change with latest commits of all current branches
- Push feature branch to GitHub (shared) repo

On GitHub repo:
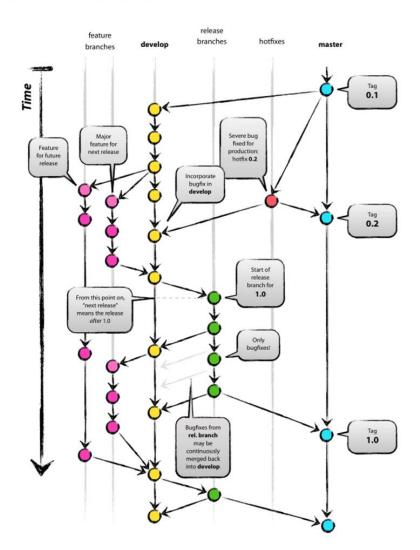

- New change is coordinated, shared, and tested
- Merged to main and release oriented branches by team leadership.
- Scheduled and tested for prod deployment
- Merges only on main, release, and hotfix branches

When problems are encountered:

- Pull branch with problem to local repo
- Baseline feature branch from problem branch
- Follow Procedure for Adding Change above

**Change Type Updates:**

- Production Ready – develop and master
- All Types – feature, pre-develop
- Fixes and Corrections only pre-master, post-develop
  - Merge feature branch to release or hotfix branch
  - Merges only on main, release, and hotfix branches
